

Cot Generation

Stage 1: Single-View Perception

In Figure 2, I identify a large shelf located in the bottom-right foreground of the image, with bounding box coordinates ... Relative to the camera's center line in Figure 1, the desk is positioned at a horizontal angular offset of 30.12 degrees to the right.

Stage 2: Cross-View 3D Modeling

By comparing the two views, I can determine the camera's movement. From Figure 1 to Figure 2, the camera underwent a significant transformation: it rotated to the right by approximately 107.65 degrees. Additionally, the camera shifted to the ...

Stage 3: High-Level Contextual Reasoning

To determine the positional relationship, I use the provided reference: the direction from the large shelf (seen in Figure 2) to the sofa is defined as "northwest." Since the ..., the simple desk in Figure 2 is located west of the sofa in Figure 1.
